

AJAX + Local Storage Project Run Guide on Ubuntu

Step 1: Open VS Code

Open Visual Studio Code in Ubuntu.

Step 2: Create Folder

Create a folder named AJAX_Project.

Step 3: Create Files

Inside the folder create:

1. index.html
2. display.html
3. style.css
4. dis.css

Step 4: Paste Code

Paste your HTML and CSS code into the respective files.

Step 5: Install Live Server

Open Extensions in VS Code and install 'Live Server'.

Step 6: Run Project

Right click on index.html and click 'Open with Live Server'.

Step 7: Fill Form

Enter Name, Email, and Age then click Submit.

Step 8: AJAX Request

Data will be sent using AJAX POST request.

Step 9: Local Storage

Data will also be stored in browser Local Storage.

Step 10: Display Page

After submit, display.html will open automatically and show all user data.

Optional Ubuntu Terminal Commands

Command	Purpose
sudo apt update	Update Ubuntu packages
sudo apt install code	Install VS Code
